S1 Agile is the truly universal IED engineering toolsuite. No-longer are separate tools required for redundant Ethernet configuration, phasor measurement unit commissioning, busbar scheme operational dashboards, programmable curve profiles or automatic disturbance record extraction – all applications are embedded.

Redefining the Engineering Toolsuite for Your IEDs

S1 Agile is the next step enhancement from MiCOM S1 Studio, encompassing all of its functionality plus new tools and features, to become the complete successor. It underlines Grid Solutions’ R&D investment in usability: assembling all tools in a palette for simple entry, with intuitive navigation via fewer mouse-clicks.

S1 Agile supports all existing MiCOM ranges, K-Series and Modulex, including a utility for automatic conversion of setting files from previous generations of numerical relays like K-series and MiCOM P20 to the latest P40 Agile models.

S1 Agile will automatically import your datamodels and configured systems/projects from Studio and all files remain backward-compatible.

S1 Agile offers a fresh new look. Functions and components are presented as “tiles” rather than menu items for more intuitive use.

CUSTOMER BENEFITS

- Configuration file creation and management, following the substation topology
- Ethernet and IEC 61850 configuration, including SCL import and export
- Programmable logic, menu text and IDMT curve profiles
- Settings conversion to the new MiCOM P40 Agile IEDs
- Event and disturbance record extraction and viewing
- Embedded product selector
- Full successor to MiCOM S1 Studio
- Zero or minimal training to move from S1 Studio to S1 Agile
ENVIRONMENT
Operating Systems: Windows XP, Vista or Windows 7, 8, 10
Languages: English, French, German, Spanish, Russian, Chinese
